

# INDEX

Note: Page numbers and ranges suffixed B, F, or T indicate that material relevant to the topic appears only in a Box, Figure or Table on that page. Where a text treatment on the same page is already indexed, non-text material is not so distinguished.

When acronyms or their expansions are used consistently, the preferred form in the text becomes the sole index entry; where both appear, acronyms are usually preferred.

## A

- A-kinase (protein kinase A) 101–103, 106, 109–110, 308–309, 440–441
- A1 (primary auditory cortex) 245, 250, 279F, 550, 551F
- AAV (adeno-associated viruses) 404–405F, 450B, 571, 583
- A $\beta$  fibers 257F, 258–259, 266, 267F, 270F
- AB interneurons 334, 335F
- absence seizures 508B
- ACC (anterior cingulate cortex) 452–453
- accessory olfactory system
  - discrimination of sex partners 401–402
  - infanticide and 406
  - pair bonding and 408
  - role in female mice 402
  - vomeranase organ (VNO) 221–222B, 397, 401F, 406
- acetylcholine (ACh)
  - cation channel opening at neuromuscular junctions 88–90
  - as a neuromodulator 370B, 371
  - as neurotransmitter at vertebrate neuromuscular junction 69–70
  - as neurotransmitter in autonomic nervous systems 86, 353
- acetylcholine receptors (AChR)
  - in chemogenetics 597–598
  - ligand-gated ion channel 90–91
  - muscarinic 93, 99, 104
  - nicotinic 92–93, 109F, 185
  - structure 90–91F
  - in synaptogenesis 297
- acetylcholinesterase 81, 84T
- Achilles tendon 329, 330F
- acquired behavior *see* learned behaviors
- acquisition stage, memory 417
- F-actin (filamentous actin) 32–34, 36B, 326–327, 328F
- action potentials
  - as all-or-none 52, 137
  - back propagating 113F
  - digital signaling in 22–23
  - in early bilaterians 523
  - initial segment initiation 14
  - ionic basis 52
- presynaptic terminal neurotransmitter release 69–70, 75
- propagation speed 53–57
- properties 52–57
- signal intensity related to frequency 13–14, 21
- active transport 30, 32, 36F, 37–38, 40
  - energy for 37F
- active zones, presynaptic terminals
  - CNS synapses 83
  - neurotrophin induction of 298–399
  - neurotransmitters at 84T
  - organization 73, 79–80
  - receptors apposing 92–93, 96
  - synaptic vesicle docking at 75, 82, 83F
  - voltage-gated Ca<sup>2+</sup> channels 75, 84T, 104
- activity-dependent changes
  - epilepsy and 510B
  - memory and 446
- activity-dependent regulation
  - local translation 504–505
  - ORNs 310–312
- activity-dependent transcription 109, 432
- activity-dependent wiring
  - Hebb's rule and 187–192, 195, 197, 321
  - molecular determinants and 190–197
  - neuromuscular connections 300–301
- adaptation (in evolution)
  - adaptive value of behaviors 603
  - and learning 434–437
  - and natural selection 519–520, 521F, 522
  - rodent freezing response 450–451B
  - value of toxins 77B
- adaptation (in sensory systems)
  - auditory, in owls 461–462
  - in bacteria 528–530B
  - olfactory 210, 228
  - somatosensory 257–258, 267F, 270
  - visual system 127, 129–130, 132
- adaptor proteins
  - in chemotaxis 528B, 530B
  - in RTK signaling 108B, 200, 305F
- addictions 493–495
- A $\delta$  fibers 257F, 258–259, 266, 267F
- adenylate cyclase
  - Ca<sup>2+</sup> activation 109, 110F, 425, 448
  - in cAMP synthesis 101
  - dopamine activation 444
  - G protein activation 106, 126
  - G $\alpha$  activation 102, 209, 532
  - inhibition 102, 104
  - in ORN feedback 214
  - rutabaga* encodings 442, 443F
  - serotonin action through 440
- ADHD (attention deficit hyperactivity disorder) 499
- adipose tissues 357–358
- Adrian, Edgar 13
- advanced sleep phase syndrome 367
- afferents 15, 233, 237, 241–242, 254
- age
  - and Alzheimer's disease 467
  - and language acquisition 19
  - and neural plasticity 5
- agonists, and neurotransmitter receptor types 92–93
- agrin protein 297–299
- AgRP (agouti-related protein) 358–362, 370B, 597F
- AII amacrine cells 145
- airway effects, sympathetic and parasympathetic nervous system 353
- AKAPs (A-kinase anchoring proteins) 102
- allele frequencies
  - ApoE 474
  - and genetic drift 519
- allelic exclusion 214
- allodynia 268
- allosteric agonists 492
- a2 $\delta$ -1 subunit 299
- $\alpha$ -synuclein, in Parkinson's disease 480–483, 487
- ALS (amyotrophic lateral sclerosis) 479–480, 487
- alternative splicing 379–380, 417
- Alzheimer's disease (AD) 467–476, 477B, 478, 480, 487
  - animal models 472–473
  - ApoE variants as risk factors 473–475

- early onset 470–472
- familial (FAD) 470–473
- heritability 473
- late onset 470, 473–475
- microglia dysfunction 474–475
- possible treatment 475–476
- sporadic 470, 473
- amacrine cells
  - All amacrine cells 145
  - asymmetric inhibition 142–143
  - location in the eye 122
  - starburst amacrine cells (SACs) 142–143, 144F
  - types 140–141
- amiloride 236, 237F
- amino acids
  - radioactively labeled 31, 36B, 181, 183
  - threonine phosphorylation 425

## O

*Ob (Obese)* mouse gene 357–358  
 obesity 357–359, 362  
 object-selective neurons 159F  
 occipital lobe 18  
 OCD (obsessive-compulsive disorder) 491  
 octopamine 86  
 ocular dominance 153, 181, 183, 196  
 ocular dominance columns 181–184,  
   188–189, 190–191B  
 odds ratios 498B  
 odor representation, stereotyped and  
   stochastic 231–232  
 odor sensing  
   behaviorally significant odors  
     230–231  
   model organisms 222–232  
 odorants  
   channel opening in olfactory receptor  
     neurons 208–209  
   recognition by combinatorial  
     activation 210, 211F  
   structural formulae 211F  
   withdrawal 224–225  
 odorant receptors  
   axon targeting in mice 307–309  
   *C. elegans* 223  
   combinatorial coding 230–231  
   *Drosophila* 227F, 229F, 533  
   genes for 210–213  
   as GPCRs 99F, 208, 211–212  
   multiplicity 207  
   odorant binding 208–209  
   in olfaction 208–212  
   relation to ORNs 214–217, 225–226  
 OFF bipolar cells 138, 139F, 140, 142, 144,  
   145F  
 Ohm's law 40–43, 45F, 46  
 Old World monkeys 133, 135, 519,  
   540–541, 560  
 olfaction, in insects 532–534  
 olfactory bulb  
   glomeruli of 214–216  
   lateral inhibition in 217–218  
   ORN links to 208  
 olfactory centers, higher 231–232  
 olfactory cilia 208  
 olfactory conditioning in *Drosophila*

   RGC axon segregation 186  
 orexin (hypocretin) 361, 369, 370B, 372  
 organ of Corti 238, 240–241, 242F  
 organization–activation model 395  
 oRGs (outer radial glia) 548–549  
 orientation of the head 253–255B  
 orientation selectivity 153

ORNs (olfactory receptor neurons)  
   axon–axon interactions 314–315  
   axon targeting in mice 307–310  
   GABA receptors and 105–106  
   in insects 532–533  
   numbers in fly and mouse 320  
   sexual dimorphism 382  
 otolith organs 253–254B  
 outer segment, rod cells 123  
 outgroups 518  
 ovariectomized females 394, 400, 403,  
   404F, 408  
 owls *see* barn owls  
 oxytocin  
   regulation of parental behavior  
     407–409  
   role in sexual behavior 409–410B

## P

P1 neurons 384–389  
 P pathway, visual system 157  
 pacemaker cells 334, 366, 368  
 Pacinian corpuscles 257T, 258, 269  
 pain *see* nociception  
 pair bonding, neuropeptide regulation  
   407–409  
 paired recordings 601  
 PALM (photoactivated localization  
   microscopy) 580  
 PAM sequences (protospacer-associated  
   motif) 566B  
 pandas, taste receptors 234  
 parabiosis experiments 356–357  
 parabrachial nucleus (PBN) 267, 353, 360,  
   361F, 455  
 paracrine signals 107B  
 parallel fibers 340–342, 427, 451  
 parallel organization  
   somatosensory system 257F  
   touch and pain signals 266–268  
 parallel processing  
   by bipolar cells 138  
   by diverse retinal cell types 140–141  
   massively parallel processing 22  
   visual system 157–159  
 parasympathetic nervous system 104,  
   351–353  
 parental behavior  
   activation and regulation 405–406  
   neuropeptide regulation 407–409  
 parietal lobe 18  
*Parkin* gene 482–483  
 Parkinson's disease  
   basal ganglia in 343  
   dopamine neurons and 480  
   genetics and 496  
   mitochondrial dysfunction 482–483  
   schizophrenia compared 488–489  
    $\alpha$ -synuclein in 480–483, 487  
   treatment 483–485, 486B, 598  
 parthenogenesis 403B

- passive electrical properties 44–47  
 passive transport 36F, 37  
 patch clamp recording  
   action potential back-propagation 112  
   cGMP effects 126, 127F  
   ion channels 57–59, 61F

   DA9 neuron and 296  
   as morphogens 279, 289, 290F, 296  
   multiple uses 317T, 319  
 Wnt-Frizzled interaction 289, 290F  
 working memory 417, 436

**X**

X chromosomes  
 and color blindness 135

non-syndromic intellectual disabilities 499  
 random inactivation 497B, 501, 541–542  
 ratio to autosomes 379  
 X-ray crystallography  
   ion channels 62–65  
   rhodopsin 125  
   SNARE proteins 76, 77F  
*Xenopus*  
   oocytes 90, 262, 263F, 533F, 535, 598F  
   retinotectal synapses 438F

**Y**

Y chromosomes 379, 393, 497B  
 yeast, budding 530  
 Young, Thomas 133

**Z**

zebra finches 391–392B, 553B  
 zebrafish (*Danio rerio*)  
   giant fibers 524  
   larvae 27, 338, 559, 605, 606F  
   as a model organism 559  
   sleep state 367  
 zygotes, cleavage and development 278
